

# 10 CONSIDERATIONS BEFORE BEGINNING YOUR WASTEWATER PROJECT

**1** Do you know what your wastewater needs are?

**6** Do you want to reclaim your treated wastewater for irrigation, sanitation or dust control purposes?

**2** Does your architect or engineer have experience designing wastewater treatment plants?

**7** Do you need a flexible wastewater system that can grow with your future expansion plans?

**3** Which regulatory agency will oversee wastewater generated by your project?

**8** Does your wastewater treatment plant need to match your facility's aesthetics? Does it need to be hidden?

**4** Have you been issued a discharge permit? If not, do you need assistance obtaining one?

**9** Will this plant be installed in a remote location or be subject to extreme weather?

**5** What is the available footprint for wastewater treatment? Do you have limited space?

**10** Do you need to rent a wastewater treatment plant for temporary purposes or purchase a system?
